***Claim Rejections - 35 USC § 112***

1. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 8, “the irregular surface of said insulation film” lacks antecedent basis. The insulation layer (not film) comprises the irregular surface. For examination purposes, the Examiner interprets as “the irregular surface of said insulation layer”.

Claim 2 comprises similar deficiencies.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Munakata (US 6373540).

Munakata discloses an active-matrix addressed reflective LCD comprising (see at least Figure 1A): a first transparent substrate (1); a second substrate (2); a lower insulation film (20) formed on the second substrate; a plurality of switching elements (8) respectively provided for each pixel, an insulation layer (9a) having a surface irregularly configured; a reflection film (9) formed on the insulation film and having an irregularly configured surface depending on the

irregular surface of the insulation layer; a liquid crystal layer (3) provided between the first substrate and the reflection film, characterized by an upper electrode (11) being provided for each pixel and located in a region wherein the reflection film is provided, the upper electrode being electrically coupled to a source electrode of the switching element; and a lower electrode (Cs) provided between the second substrate and the lower insulation film, the lower electrode inherently forming a storage capacitance with the upper electrode.

Munakata discloses (see at least Figure 1A) the irregularly configured surface of the insulation layer (9a) comprises a plurality of substantially linear projections, and a plurality of recesses surrounded by the linear projections.

Per claims 3-7, see at least Figures 1-2.

It is noted that “patterned by lithography” has been not been given patentable weight because they have been held that even though product-by-process claims are limited by and defined by process, determination of patentability is based on the product itself.

### *Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
